What you need is a robust network that keeps up with the changing times without sacrificing security OR performance. And there is none better than Juniper Networks, APC, mi5 & Cymbel to address these challenges.

- How to reduce the complexity of security solutions without compromising security
- How to increase revenue dramatically by integrating the latest web-based applications to your network
- Best practices to increase the availability of your business-critical processes
- Proven ways to simplify network design while maintaining predictable performance
- Why forward-looking companies such as SWIFT, Hitachi Consulting, and RadioShack value our security solutions
- Take a Tour of APC's InfraStruXure System – An on-demand architecture for network-critical physical infrastructure, the foundation upon which all highly available networks depend. It includes the latest large systems, both single and 3-Phase UPS, cooling and power distributions and the NetBotz Remote Monitoring Surveillance System!
